

## Project Implementation Plan

- Complete wireframe of the project and finalize on feature scope
- Implement backend modules for different apps like telegram, Gmail, calendar, Twitter etc.
- Integrate the modules together to create standard integrations to be provided to the user.
- Implement Google OAuth for authentication purposes
- Implement and expose a backend API
- Test the API for various integrations
- Deploy the backend API on Heroku
- Implement the frontend to be used by the user.
- Integrate the frontend with the backend exposed on Heroku
- Demo the application end to end

## Technical Details

### Backend

- Server Implementation Language: Javascript(NodeJs and Express)
- Database: MongoDB
- Deployment Medium: Heroku
- Authentication: Google OAuth

### Frontend

- HTML, CSS, Bootstrap and Vanilla Javascript
